ABOUT ME

Also known as pyTony the man behind Python Mentor Bank and the co-Founder of OceanSofty.com; I have a proven record of online learning, teaching, and self-taught ability. I believe one can say they know something only when they can teach it to the next person.

I am a junior Data Scientist graduate from HyperionDev, self-taught software and web designer. I am currently completing a Flutter course for Mobile app development and was recently accepted in the Microverse global school for remote software developers. I'm highly passionate about the Python language; my wildest dream is to be identified as a Python master.

SCAN ME
